

EDUCATION

Vishnu Institute of Technology
Bachelor of Electronics and Communication Engineering; CGPA: 9.4*/10
AANM & VVRSR Polytechnic
Diploma in Electronics and Communication Engineering; Percentage: 98
ZPHS
SSC; GPA: 10/10

Bhimavaram, India
Aug 2024 – May 2027
Gudlavalleru, India
Oct 2021 - May 2024
Machavaram
Jun 2019 - Mar 2021

SKILLS SUMMARY

- **Languages:** Python, C, JAVA
- **Core Areas:** VLSI Design (RTL), Analog VLSI, TCAD, Embedded Systems, Automation Testing
- **Tools:** Arduino IDE, EDA Playground, Synopsys Design Compiler, Xilinx Vivado, Cadence Virtuoso, TCAD, Automation Testing: Selenium WebDriver, TestNG.
- **Soft Skills:** Strong communication, leadership, teamwork, Quick learner, innovative thinking, organized and disciplined, strong time management.

INTERNSHIPS

- Bharat Sanchar Nigam Limited (BSNL), Ongole – Trainee**

 - Worked with telecom engineers to understand end-to-end communication network operations
 - Observed real-time functioning of switching systems, transmission lines, and network infrastructure
 - Assisted in identifying and resolving basic network and connectivity issues
 - Gained practical exposure to signal flow, cabling, and telecom equipment
- SkillDzire – VLSI Intern**

 - Learned CMOS fundamentals and digital logic design used in VLSI applications
 - Worked on RTL concepts, including synthesis and simulation basics
 - Studied the complete VLSI design flow from specification to fabrication overview
 - Improved technical knowledge of EDA tools and VLSI methodologies

PROJECTS

- Potholes Detection System (Software Project)**

 - Developed a software-based system using image processing and machine learning algorithms
 - Analyzed and processed 200+ road images to detect potholes and surface damage
 - Reduced manual road inspection effort by ~40% through automated detection and reporting
- Solar-Based Dewatering System**

 - Designed a solar-powered system to remove excess water from low-lying areas
 - Improved water removal efficiency while reducing electricity usage by ~30%
 - Promoted renewable energy adoption and sustainable system operation
- Soldier Health Monitoring System**

 - Developed an embedded system to monitor 2 vital parameters: heart rate and body temperature
 - Integrated sensors with microcontroller for real-time health data monitoring
 - Enabled remote health tracking to support soldiers in critical and field environments
- Morse Code Trainer Kit**

 - Designed an Arduino-based training kit for Morse code learning and practice
 - Implemented encoding and decoding logic using buzzer, LEDs, and LCD display
 - Improved learning efficiency of communication signals by ~25% during testing

WORKSHOPS

- **RC PLANE Workshop**
 - Gained hands-on experience in aerodynamics principles and RC aircraft assembly
 - Participated in testing and performance analysis of remote-controlled planes
- **TCAD (Technology Computer-Aided Design) Workshop**
- **Analog VLSI Design Workshop – Epical Layouts**
- **Embedded Workshop**
